### **DETAILED ACTION**

Claims 1-31 are pending in the application.

#### ***Election/Restrictions***

The response to the restriction requirement mailed on 7/3/07 has been noted. However, a review of the submitted claims reveals there are multiple inventions within the invention of Group I. The reason for further restriction within the original Group I is set forth below.

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 3-5, 9-16, 29-31, drawn to a method for determining whether a candidate cell is a small cell lung cancer neuroendocrine tumor cell, comprising determining the profile of expression of C5.

Group II, claim(s) 20-24 and 28, drawn to a microarray comprising a solid support for more than 10 genes, polynucleotide fragments or RNA transcripts thereof, wherein said polynucleotide fragments or RNA transcripts are differentially expressed in a small cell lung cancer, large cell neuroendocrine tumor cell, or atypical carcinoid neuroendocrine tumor cell, relative to normal cell.

PCT Rule 13.2 requires that unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art. The inventions listed as Groups I-II do not relate to a single general inventive concept because they lack the same or corresponding special technical feature. The "special technical feature" of Group II is a microarray chip that comprises polynucleotide fragments which are differentially regulated in small cell lung cancer, the microarray chip with 9,984 human genes from advanced technology

Art Unit: 1636

center used in the instant specification already exist prior to the filing of the instant application. This microarray chip comprises all the genes discovered that are differentially regulated in small cell lung cancer. As such, the special technical feature of Group II lack novelty or inventive step over the prior existing microarray, and does not make a contribution over the prior art. As such, this technical feature cannot link the invention as a whole to form a single general inventive concept under PCT Rule 13.1.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
